Configuring Attachment Assignee Program in Neomutt

There is a mailcap configuration file for this matter (Please refer to neomutt.org (2023) and raymii.org (2022)) . This can be put in various places. If you use mutt-wizard its place is in /usr/share/mutt-wizard/mailcap. But as mutt-wizard configuration allows to place your own copy under $HOME/.config/mutt/mailcap you may put your editted copy there.

Here is an example file (most from mutt-wizard) also allows to open msword documents with libreoffice:

```
text/plain; $EDITOR %s ;
text/html; /usr/lib/mutt-wizard/openfile %s ; nametemplate=%s.html
text/html; lynx -assume_charset=%{charset} -display_charset=utf-8 -dump -width=1024 %s; name
image/*; /usr/lib/mutt-wizard/openfile %s ;
video/*; setsid mpv --quiet %s &; copiousoutput
audio/*; mpv %s ;
application/pdf; /usr/lib/mutt-wizard/openfile %s ;
application/pgp-encrypted; gpg -d '%s'; copiousoutput;
application/pgp-keys; gpg --import '%s'; copiousoutput;
application/msword; libreoffice %s
```
